WHAT IS PORTFOLIO? “

A portfolio is a component collection of programs, projects, or operations managed as a group to achieve strategic objectives. The portfolio components may not necessarily be interdependent or have related objectives.

If a portfolio is not aligned to its organizational strategy, the organization should reasonably question why the work is being undertaken.

If you can't see the future of your organization by looking at your portfolio, you have no chance of getting there.

01

Portfolio management is the crucial link- or glue - between strategic intent and the initiatives that deliver strategy.

02

Portfolio management is a tangible way to operationalize the strategy. It allows organizations to make the most efficient use of resources and understand the benefits of each of their investments.

03

It helps ensure credibility and increased accountability to stakeholders and enhances the ability to make timely and strategic cuts when needed.

04

Organizations with mature portfolio management practices complete 35 percent more of their programs successfully. They fail less often and waste less money.
